Amendments to the Abstract of the Disclosure

A continuous-path controlled window regulator ~~is provided having~~includes a driver arranged on a guide plate in a motor vehicle and which can be displaced along a displacement trajectory formed by ~~a guide way defined by the guide plate~~a window guide rail. The driver includes guiding elements arranged on the front and rear edges of the guide plate, ~~which are arranged on the window guide rail, on the front and rear edges of the guide plate~~. At least one first guiding element arranged on the front edge of the guide plate and at least one second guiding element arranged on the rear edge of the guide plate are disposed in such a way that they are displaceably mounted with respect to each other. The first guiding element can be in a mounting position in order to be mounted on the guide ~~way~~rail of the guide plate.

Attachment: An Abstract of the Disclosure, on a separate page, follows page 14 of this Amendment.
